

5.6/148

$$E_{p1} = \frac{1}{2} m g l$$

$$E_{k1} = 0$$

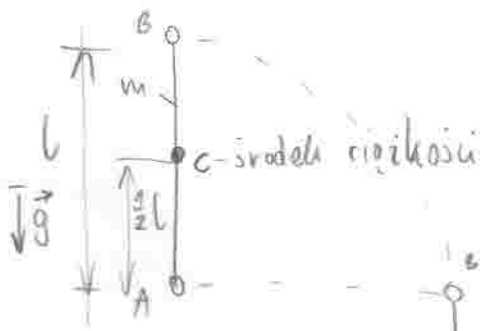

$$v = \omega \cdot l$$

$$E_{p2} = 0$$

$$E_{k2} = \frac{I_2 \omega^2}{2}$$

$$\omega = \frac{v}{l}$$

m - masa rózki
l - długość

$$E_{p1} + E_{k1} = E_{p2} + E_{k2}$$

$I_0 = \frac{1}{12} m l^2$ dla osi przechodzącej przez środek pręta

$$I_2 = I_0 + m d^2 \quad \left\{ d - \text{odległość od osi} \right\}$$

$$I_2 = \frac{1}{12} m l^2 + m \cdot \left(\frac{1}{2} l\right)^2$$

$$I_2 = \frac{1}{12} m l^2 + \frac{1}{4} m l^2$$

$$I_2 = \frac{1}{3} m l^2$$

$$E_{p1} = E_{k2}$$

$$\frac{1}{2} m g l = \frac{I_2 \omega^2}{2} \quad / \cdot 2$$

$$m \cdot g \cdot l = I_2 \cdot \omega^2$$

$$m \cdot g \cdot l = \frac{1}{3} m \cdot l^2 \cdot \left(\frac{v_k}{l}\right)^2$$

$$m \cdot g \cdot l = \frac{1}{3} m \cdot l^2 \cdot \frac{v_k^2}{l^2} \quad / \cdot m \quad / \cdot 3$$

$$3 \cdot g \cdot l = v_k^2$$

$$v_k = \sqrt{3 \cdot g \cdot l}$$
